

This is a sample specification for a manhole cutter. The cutter must have the features listed below:

Adjustable cutting arms to allow various cutting diameters from 28" to 60" and 72" with optional accessories.

A cutting depth of 14" and up to 20" with optional extended cutting blades.

A heavy-duty auger motor with a 2.5 in. hex drive.

All necessary hoses and fittings to attach a hydraulic motor.

A universal mounting plate for attachment to a skid steer loader. The mounting plate must have a 12" offset forward of the skid steer to allow large diameter cuts.

Quick remove and replace teeth with carbide tips for cutting asphalt and concrete including a spare set.

An online training video for operating the cutter and rebuilding manholes.
